Comparing Engines

The content of our presentation would be:

- Why we chose this topic
- What our website includes
- A showcase of our web-application

Why we chose this topic:

The answer is pretty simple. We are both turning into an age, where cars play a very important role in our lifes. First of all it is just cool having your own car. So we thought about how the engines behing our beloved cars actually worked and that is when we came up with this idea.

What our website includes:

On our website we explain what a combustion engine is and what an electrical engine is and we are also comparing these two types of engines. Then we got a page where we tell you how we came up with this idea. There is also a contact-site.

The web-application:

The web-application on our web page is a small game. Your goal is to drive as far as possible and to break your own record. But you have to dodge randomly generated cars. It is possible to move right, left, forward and backward. The game is over if you crash into an other car.
